Response Text		
1	It definitely lacks a wiki system.	Jun 23, 2010 9:51 AM
2	Lack of love for some areas such as answers and blueprints.	Jun 23, 2010 9:57 AM
3	Nothing stands out yet	Jun 23, 2010 9:58 AM
4	Blueprints are not very convenient to manage. Therefore, I mostly use wishlist reports instead. I know this is not the same goal, and that it should be avoided, but blueprints really need some additional features, such as a search dialog, a global subscription system, an easy and straightforward method to mark it invalid...	Jun 23, 2010 10:03 AM
5	Confusion when navigating between different releases or branches of projects and their different bug tracking or translation pages. Sometimes it really isn't clear that you're looking at a series-specific bug report, which bugs only pertain to that, whether bugs on the main project apply to the series, where you should submit them etc. The overall hierarchy of navigation is lacking.	Jun 23, 2010 10:09 AM
6	I may have missed it, but it would be good to be able to have a PPA for my project, instead of having to use my own PPA - and yes, I know the first 'P' stands for 'Personal'. Or at least be able to link to the released package in my PPA from the project page. Just generally tighter integration between the project side and the PPA side.	Jun 23, 2010 10:16 AM
7	Unable to convert bugs to blueprints directly.	Jun 23, 2010 10:33 AM
8	It can be very difficult to find "things"	Jun 23, 2010 10:49 AM
9	It is not that easy to fully create a profile, with a project, the linked ppa, etc. It can be confusing.	Jun 23, 2010 11:38 AM
10	When you want to delete or rename something (a project, a team, a mailing list, a PPA, ...) most of the time you need to ask an administrator. Although admins are fast most of the times, you have to wait for them and this slows down your work.	Jun 23, 2010 11:41 AM
11	Centralisation.	Jun 23, 2010 11:43 AM
12	- Inconsistencies ! When I list bug, sometimes I can order them, sometimes not. Sometimes I see bug heat, sometimes I see the assignee. This is very annoying : it's just bug listing, why is it not always what I want ? - The fact that I don't have a "latest bug touched" on the overview (Was I dreaming or did it existed before ?) - Q&A and blueprints are somewhat unclear, redundant with bug listing but some karma whores use it because it add lot of karma.	Jun 23, 2010 12:31 PM
13	That is english only and sprints are only for Ubuntu	Jun 23, 2010 12:32 PM
14	the update manager does not pull changelogs from PPAs	Jun 23, 2010 12:42 PM
15	Often slow, feature-rich UI is sometimes confusing for new users.	Jun 23, 2010 12:47 PM
16	oldstyle look in the age of AJAX an HTML5, slow loading of long buglists - for example ubuntu open bugs	Jun 23, 2010 12:53 PM

Response Text		
17	I'm missing a wiki for my projects.	Jun 23, 2010 12:54 PM
18	not always easy / clear what / how / where to do things openess?	Jun 23, 2010 12:57 PM
19	User Interface is sometimes confusing	Jun 23, 2010 1:05 PM
20	It lacks the possibility to interact with other translators (tell them what they have to do to see their suggestions approved...), and we need some way to get rid of translation suggestions which are no longer used, but still appears in Launchpad (and some new contributors accept, eventually)	Jun 23, 2010 1:05 PM
21	Lack of git support, seemingly inability to log in with an OpenID from another provider.	Jun 23, 2010 1:05 PM
22	the overview page of a project is much too crowded. I would like to be able to use launchpad as the homepage of a project (often there is not much needed in addition to the services already available in launchpad, maybe a nice startpage and a documentation page).	Jun 23, 2010 1:06 PM
23	finding blueprints is not that simple as finding bugs.	Jun 23, 2010 1:09 PM
24	There are some things that you need to ask the launchpad team to do for you, and by the time you go to ask, you've already spent a bunch of time trying to figure out how to do it.	Jun 23, 2010 1:11 PM
25	slowness :(Jun 23, 2010 1:16 PM
26	There's no wiki, so a project cannot rely only on Launchpad.	Jun 23, 2010 1:16 PM
27	Sometimes it's hard to find bugs in the lists	Jun 23, 2010 1:18 PM
28	hard to discover cool projects	Jun 23, 2010 1:21 PM
29	Sometimes it is slow. Sometimes things are hard to find.	Jun 23, 2010 1:36 PM
30	It doesn't have wiki pages for projects. No git support, only bzd.	Jun 23, 2010 1:37 PM
31	UI is completely english, with no plans to change this	Jun 23, 2010 1:38 PM
32	Slow	Jun 23, 2010 1:41 PM
33	Can't delete my PPA.	Jun 23, 2010 1:52 PM
34	Lack of support for other VCSs.	Jun 23, 2010 2:01 PM
35	sync to other projects like git, and not only bzd	Jun 23, 2010 2:08 PM
36	Slowness in searches	Jun 23, 2010 2:08 PM
37	The blueprint section could use some love. Discussions on whiteboards are clumsy. Also, a finer granularity of permission management would be desirable. As a maintainer of some Debian/Ubuntu packages (~lantash), it shouldn't require me to apply to Ubuntu Bug Control just to be able to triage bugs filed against the packages I maintain. The whole process of making project releases (building source tarballs, uploading to the project download section as well as the project PPA, marking bug as 'Fix released' etc. could probably be streamlined and partially automated. I already use a script that does at least some of it. Also, one might think about introducing new facilities to attract new developers. The mentoring feature apparently wasn't such a great success, as it was removed a while ago. One might consider making Launchpad.net more "social", featuring a better integration with Ubuntu! Waiting half an hour for a PPA build isn't that much fun.	Jun 23, 2010 2:15 PM
38	too many concepts that don't help when dealing with many small projects that act together as a whole (e.g. the zope universe)	Jun 23, 2010 2:22 PM
39	sloooow individual projects can't modify launchpad to their needs	Jun 23, 2010 2:24 PM

Response Text		
40	<p>Lack of features: No site hosting No wiki hosting (this is the main problem for me) No detailed statistics (such as SourceForge)</p> <p>Project pages could be more customizable Project tags would be useful Automatic packaging would be good, but that's more of a Debian than Launchpad problem. (i.e. all/most the packaging work should be done automatically if possible, not requiring/simplifying the process of creating a project's debian directory)</p>	Jun 23, 2010 2:28 PM
41	not yet.	Jun 23, 2010 2:31 PM
42	Bug management could be improved	Jun 23, 2010 2:33 PM
43	<p>Sometimes the slowness of the servers. Locating information should be easy, but many times it isn't. On my wish list for the "Answers" page, I'd like a check box when I'm posting an answer to indicate whether it's only a "suggestion", a "work-around" or "please respond back to this thread". Most of the time, people posting information don't detail the situation enough and time is wasted asking for more information. Some questions that are answered are not really finished until the "Solved" posting is shown. People need to know that they should stay with it until some kind of resolution is found. I don't find the column with the related application listed such as "gedit" very useful and it's probably less useful for the person posting the question. Last, I wish that the question numbers weren't of the form 115325 but were 100623-105 so the first part could indicate the posting date. This would make searching for it later much easier.</p>	Jun 23, 2010 2:34 PM
44	None	Jun 23, 2010 2:37 PM
45	<ul style="list-style-type: none"> - It's slow. It takes almost 10 seconds to start loading the first page. - The layout has too much white space. It's hard to determine at a glance what items are global, what is section specific content and what is actual page content. Consider using visual effects such as tabs and shadows. - The main nav (Overview, Code, Bugs...) has unexpected behavior. If you view an answer with a source package applied then click Bugs, it takes you to bugs for that package. The nav had the Ubuntu logo next to it, so I would have expected it to take me to bugs for Ubuntu. - The Answers section has an Assignee column which I've never seen used and wastes space (I browse on a 1024x768 laptop). - The Answers section has other unnecessary columns like the help icon, ID number and source package. Even the submitter name is unnecessary. - Users sometimes put their email address as their username which stretches the column. Maybe a max limit on username length should be implemented. - The Question Information section of an Answers page has information placed seemingly randomly. That information could probably be moved to the right side bar. Delete the subscriber names completely as that's just clutter. 	Jun 23, 2010 2:41 PM
46	<p>Bugs that I report being marked as a duplicate of a hidden bug, which I cannot see the details or status of after it's marked as a duplicate, nor can I confirm that it is a duplicate of that bug. This "feature" of randomly closed bugs pisses me off.</p> <p>Direct intergration with bzd, but no support of git</p> <p>Slow as hell on firefox on Ubuntu.</p>	Jun 23, 2010 2:43 PM
47	Blueprint's aren't practical for discussions. I prefer to create feature bugs.	Jun 23, 2010 2:46 PM
48	No Glossary of words. What can make the translation more uniform and speed up the process	Jun 23, 2010 2:54 PM
49	<p>Performance (actually, it seems that lately it's been improved) Lack of a simple & integrated web hosting: sure it would be a burden, and would bring many more complexity... but i've seen some launchpad projects use a sourceforge page, and it simply doesn't feels right.... Can't push commits behind a restrictive firewall... i know there exists a webdav plugin for bzd, but afaik i can't use it with launchpad</p>	Jun 23, 2010 3:00 PM

Response Text		
50	It's slow, sometimes complicated. If you get a link to xyz/+archive or something, it's hard to find the binaries, I just don't get where I think I should be clicking a link.	Jun 23, 2010 3:02 PM
51	- sometimes is slow, - it's not easy enough to get from a project page to the main launchpad site	Jun 23, 2010 3:27 PM
52	- sometimes is SLOW - the need to copy paste a PPA address (come on people, we are in 2010. why not some simple javascript)?	Jun 23, 2010 3:31 PM
53	launchpad mail not being sent with attributes set for lists, it makes it dead impossible to filter correctly in GMail, this has been an issue for years.. fix it. It's hard to report certain kinds of bugs (in fact any bug that isn't reported with ubuntu-bug Launchpad makes inheritly near impossible to get right through the web interface).	Jun 23, 2010 3:37 PM
54	Performance can be still be a little slow sometimes although it has significantly improved as compared to a while ago.	Jun 23, 2010 3:44 PM
55	The fact it is inordinately difficult to install and configure on any machine, and nearly impossible to install or configure on non-Ubuntu machines.	Jun 23, 2010 3:47 PM
56	The PPA pages are less convenient than they used to be.	Jun 23, 2010 3:53 PM
57	I have no idea how to locate documentation and materials that developers refer to (and demand knowledge of), and no idea how to become involved	Jun 23, 2010 4:04 PM
58	Sometimes slow Blueprints confusing No wiki/hosting support No inbuilt daily ppa builds	Jun 23, 2010 4:13 PM
59	I hope it is as easy as Kenai.com , I can host projects directly from my NetBeans. launchpad is so tough to learn when it comes to project hosting. If they can develop click host GUI for project hosting it will be great!	Jun 23, 2010 4:26 PM
60	totally slow	Jun 23, 2010 4:55 PM
61	It's very common to get lost amidst innumerable links.	Jun 23, 2010 4:56 PM
62	Bug status messages to make no sense. Marking a bug as invalid because it was solved in release upgrade doesn't make sense.	Jun 23, 2010 4:57 PM
63	It looks like it's very easy, yet it's not. SourceForge is much easier to browse, ever though some things are a bit archaic. LP can use some of the UX love that Lucid got	Jun 23, 2010 4:58 PM

Response Text		
64	<p>It takes several seconds to load each page. I'm constantly waiting for the server to respond.</p> <p>The ui is sluggish in firefox(but good in webkit based browsers). There is way too much stuff changed dynamically using javascript.</p> <p>The new time based caching is horrible, and always showing expired data. This makes bug management frustrating.</p> <p>The term triage is very obscure and vague.</p> <p>The UI does not work well in low width situations (browser next to text editor, or a small screen).</p> <p>The terms series, milestone, and release are extremely confusing. See bug #174468 .</p> <p>Very few projects actually use blueprints. Blueprints need to work more like a wiki. That is why they end up just being links to the ubuntu wiki. External projects do not want to use the ubuntu wiki.</p> <p>Trying to deploy launchpad on your own server is way too hard. There is no way to backup or export your project data.</p> <p>It would be great if LP showed how many times your project was downloaded.</p> <p>Mailing lists are tedious to use, and scare new users away. Something like this would be an improvement: http://mairin.wordpress.com/2010/03/16/a-rich-web-interface-for-mailing-lists/</p> <p>I prefer Bazaar. But many people like Git. So native Git support would be great.</p>	Jun 23, 2010 5:08 PM
65	<p>* SLOW SLOW SLOW SLOW page refreshes take forever, and forget it if its a bug from hell with 100+ comments, I open a tab and go and take a leak</p> <p>* Bugs doesn't have basic sorting, viewing functionality. Needs to be more standard like bugzilla</p> <p>* Too many clicks to do simple things like change status, just put a drop down there and be done with it, way too much javascript/ajax junk</p>	Jun 23, 2010 5:08 PM
66	no problems for me	Jun 23, 2010 5:12 PM
67	<p>no native git hosting not a OpenID consumer</p> <p>both of these make LP much less attractive to the non-Ubuntu part of the free software world</p>	Jun 23, 2010 5:13 PM
68	<p>non-customizable project homepage no full forum (only the Answers section)</p>	Jun 23, 2010 5:35 PM
69	The user interface scares some new users. The people who would go to ubuntuforums.org for technical assistance could be better served by Launchpad if we could make it easy for them. (Perhaps even disguise it as forums ;)	Jun 23, 2010 5:41 PM
70	<p>It can be a bit slow sometimes. Navigation is sometimes confusing. For example, I sometimes have trouble finding an old bug that I reported.</p>	Jun 23, 2010 5:47 PM
71	Is not translated in other languages (like spanish) and somedays it's so slow!	Jun 23, 2010 6:03 PM
72	Sometimes is hard to find help.	Jun 23, 2010 6:09 PM

Response Text		
73	<p>Hard to see the big picture (maybe because there is too much to show). For example, last time i used Rosetta translations were hard to navigate through. If you didn't remember where a particular string was i just had to keep clicking to the next page until i found it.</p> <p>Similarly, you can see on the branch page which bugs are attached to it. You can also see on the bug page which branches are attached to it. But if I want to see all the branches and all of the bugs they connect to and which branches are for features instead of bugs, well that requires lots of clicking and waiting for page loads.</p>	Jun 23, 2010 6:45 PM
74	That it still doesn't have a wiki feature or place where people could upload the project's documentation.	Jun 23, 2010 7:09 PM
75	Perhaps could advertise more simple ways for average folk to get involved. Similar to the five a day.	Jun 23, 2010 7:11 PM
76	I would rather see that ppas are linked to applications and to only one application. Sometimes I find an application and have to search for ppa that contains it and sometimes ppas contain other packages that I don't want to upgrade. The blueprints should allow more communication (comments), like ubuntu brainstorm.	Jun 23, 2010 7:14 PM
77	The number of keys required to login each time. First, hit login. Then hit continue. Then enter the user name and password. Then verify the user name is correct. That is about three entries more than I need to feel secure, and about three entries more than any other login system I use on the internet. I do log in to several bugzilla accounts, four websites, and a couple of wiki's daily.	Jun 23, 2010 7:25 PM
78	I don't know	Jun 23, 2010 7:41 PM
79	Occasionally slow to access (from the US at least). Bug searches often don't find reports that they should (your indexer and search engine disagree over what characters make up a word). No built-in wiki or other means to store/serve rich text, so I can't completely host a project here.	Jun 23, 2010 7:43 PM
80	The web interface is slow. Dead slow. Please do something about it	Jun 23, 2010 8:07 PM
81	It's speed and the fact that it is not possible to specify components or versions as affected or as containing a fix.	Jun 23, 2010 8:08 PM
82	Nothing specific	Jun 23, 2010 8:13 PM
83	It is slow and the terminology is not natural	Jun 23, 2010 8:36 PM
84	Very confusing interface for the Ubuntu user who just wants to figure out why something does or does not work. I find it annoying that there is a link to see all bugs I've opened or subscribed to, but no link for all bugs that affect me.	Jun 23, 2010 8:46 PM
85	<p>No easy way to jump from ubuntu package to debian package / debian pts. I really want a single click to those pages from lp.net/ubuntu/+source/\$package</p> <p>Launchpad.net also needs a url shortening service e.g. lp.net. Similar to theyoutu.be service: youtu.be/szk3KK6gLQ0 redirects to http://www.youtube.com/watch?v=szk3KK6gLQ0</p> <p>E.g. you could do lp.net/ubuntu/package links =) or better lp.net/u/package for landing page, b.lp.net for bugs and c.lp.net for code and so forth =)</p>	Jun 23, 2010 9:42 PM
86	Graphic, search	Jun 23, 2010 9:45 PM
87	The blueprints system	Jun 23, 2010 9:49 PM
88	No search bar at the top of the page while viewing projects, bugs etc - this breaks convention with many other websites and is kind of annoying. Also, Launchpad seems to work well once you get up and running with it, but getting your profile setup correctly and learning the UI, etc can be daunting - there's a definite learning curve to it (bear in mind this is coming from a person with no previous bug tracking system experience).	Jun 23, 2010 10:00 PM

Response Text		
89	<ul style="list-style-type: none"> * Too many steps & unintuitive paths to get from one common point to the other common point (e.g. upstream project > ubuntu non-release-specific-package-page) * Hard to do a search and get to the main source page for a package in ubuntu * Search now at the bottom (still not come to terms with that, likely never will) * Simple status changes flood bug comments unnecessary. * Arguments/flamewars/irrelevance in comments (Not an LP fault per se, I know) * Slow loading of large bugs, and only shows half of them at that. 	Jun 23, 2010 10:03 PM
90	<p>Rosetta, see http://www.jonobacon.org/2010/03/26/planning-for-10-10-growing-our-translations-community/#comment-139314</p> <p>Pushing bugs upstream is cumbersome, see https://bugs.launchpad.net/malone/+bug/587306</p> <p>https://bugs.launchpad.net/malone/+bug/1357</p> <p>You can't configure the mail notifications in Malone</p>	Jun 23, 2010 10:05 PM
91	<p>Missing git support.</p> <p>With git in place I wouldn't keep any code on github. I love Launchpad's bug tracker. I love Launchpad's translation integration. I'm not that into bzt.</p>	Jun 23, 2010 10:23 PM
92	<p>Slightly heavy (loading time)</p> <p>Too many down times</p> <p>The interface cannot be customized</p>	Jun 23, 2010 10:55 PM
93	slow	Jun 23, 2010 11:06 PM
94	Not enough people use it! We need wiki pages for blueprints. Blueprints generally are a mess.	Jun 23, 2010 11:06 PM
95	That there is no wiki.	Jun 23, 2010 11:27 PM
96	Nothing	Jun 23, 2010 11:27 PM
97	<ul style="list-style-type: none"> * It is extremely slow, please spend time trying to make it faster and snappier * Does not have a wiki so you can't host a project * Missing a feature similar to githubs fork 	Jun 23, 2010 11:42 PM
98	The lack of support for git, though we can host our source code on gitorious and import it onto Launchpad, so it's not a show stopper for us.	Jun 23, 2010 11:46 PM
99	not be in my language	Jun 24, 2010 12:07 AM
100	Launchpad is slow.	Jun 24, 2010 1:44 AM
101	Slowness	Jun 24, 2010 4:45 AM
102	<p>Some features are not very clear and easy (I spend a lot of time to understand packaging through PPA).</p> <p>There are some features missing, but it's just about time ;)</p>	Jun 24, 2010 8:00 AM
103	the way that searches are presented	Jun 24, 2010 11:36 AM
104	not much, haven't had much to gripe about, yet.	Jun 24, 2010 11:36 AM
105	I don't always find my way around.	Jun 24, 2010 3:36 PM
106	There are some little annoyances (already filed as bugs), but all in all Launchpad is the best development platform out there.	Jun 24, 2010 6:49 PM
107	Page load times. Lack of a wiki.	Jun 24, 2010 8:29 PM
108	Making a new release complete with downloads is not intuitive and is difficult and slow. Could be improved. The ability to edit the descriptions of uploaded files would be nice. This is why I do not use auto-uploading of files for releases, the description is blank and cannot be edited. Launchpad is a very good system otherwise. Thank you!	Jun 24, 2010 9:48 PM
109	That project pages doesn't show ppas connected to projects.	Jun 24, 2010 10:42 PM
110	<p>Slow servers all the time.</p> <p>Launchpad is quite possibly one of the worst websites to navigate through. I'm not sure why I dislike it so much but I do, and it's probably one of the reasons I don't contribute very often to the Ubuntu project. Everything about Launchpad is nauseating and frustrating, especially when you have to deal with the slowness.</p>	Jun 25, 2010 2:23 AM

Response Text		
111	Sorry for the yelling: THAT IT'S NOT I18N. We **need** it in Spanish ;)	Jun 25, 2010 2:43 AM
112	<p>Cannot do bulk editing of blueprints and bugs. If I need to change many blueprints or bugs to say change a milestone or series, I have to do each one by hand, which is a royal pain.</p> <p>Cannot customize which fields to display from bug search results. For example, right now I don't see who the bug is assigned to and 90% of the time that is what is most important to me.</p> <p>Cannot search for bugs that are targeted for a series in advanced bug search</p>	Jun 25, 2010 4:20 AM
113	It's often quite slow, the interface seems a bit overwhelming at times.	Jun 25, 2010 11:29 AM
114	Slow	Jun 25, 2010 1:29 PM
115	the personalitation for users	Jun 25, 2010 1:37 PM
116	<p>Bug-management tools are awful</p> <p>Page loading is still kinda slow</p>	Jun 25, 2010 8:42 PM
117	<p>It probably needs some UI cleanup not to distract new and even advanced users.</p> <p>It needs some ability to add comments on blueprints even it's not publicly editable.</p>	Jun 26, 2010 12:03 PM
118	Language, please, let us translate it :)	Jun 26, 2010 6:59 PM
119	Not that easy to "fork" as in GitHub	Jun 27, 2010 12:44 AM
120	git is better ;)	Jun 27, 2010 8:59 AM
121	Some help pages are confusing.	Jun 28, 2010 12:23 AM
122	work a little bit slowly	Jun 28, 2010 3:43 AM
123	The queue interface. Can we please just have "search for \$package in ANY status"? Also, the unnavigability of Launchpad Librarian stuff. Finding the deb of a version of a package from its /ubuntu/+source/foo page takes way too many click-throughs.	Jun 28, 2010 4:33 AM
124	<p>In general: Too many bugs (not in LP but handled in LP) = slow fixing and too many duplicates.</p> <p>LP: 1) With bug pages: A bug is affecting lets say 5 people, but the bug is still marked as new and not confirmed; please do some magic to this.</p> <p>2) Some privacy please; please don't make the bug listing pages (commented bugs, subscribed bug, etc) of a person public to everyone. Please also fix bug 111147.</p>	Jun 28, 2010 12:13 PM
125	pages with more than 100 comments	Jun 28, 2010 1:31 PM
126	<p>I HATE that you can't attach multiple documents in one comment. This makes updating bug reports with log files extremely spammy and makes me not want to wade through all the useless whitespace.</p> <p>The update notifications (description, summary, tags, importance, etc) are also very spammy, especially when updating all of them at once. It would be nice if there was a way to turn off these notifications and only read comments, or condense all the notifications done in a 5 minute period into one comment.</p>	Jun 28, 2010 8:21 PM
127	one and the same bug appears as different bugs in different contexts. this bug context thing is confusing.	Jun 28, 2010 8:53 PM
128	<p>As someone who follows and registers bugs that affect my Desktop experience I find it very frustrating that I can't follow bugs that "affect me" directly, and I am not notified when the status of these bugs changes. The only way I can follow these bugs is by subscribing to them. Why isn't there a panel for bugs that affect me?</p> <p>Another issue I have is with mirrors of upstream vcs such as that for Wordpress (but also applies to other upstream software) As far as I can tell, upstream vcs mirrors on Launchpad often track head or some older stable branch, but not a whole remote repository. This means that I can't use bazaar to merge new release tags from Launchpad - I have to use bzr-svn on the upstream vcs.</p>	Jun 28, 2010 10:31 PM

Response Text		
129	It's not always easy to see where I am in the system. Is this an Ekiga bug page or Ekiga on Ubuntu bug page. More stylistic theming would help here.	Jun 28, 2010 10:47 PM
130	It seems to discourage non-Ubuntu fans and force people to use Canonical products. The fact that it doesn't support any other DVCS than bazaar is disappointing. There are a huge number of git and hg fans that hate LP only because of that. Also, LP seems to refuse to allow PPAs for Debian. Since project space is already limited, it should be up to the project managers how they allocate their PPA space to binaries for different distributions. Debian being a very important distro for Ubuntu, I believe Debian bins should be supported. I understand this had been discussed before, but I would be extremely glad if this were implemented. This would also boost Ubuntu's reputation among Debian users and developers also.	Jun 29, 2010 6:01 AM
131	Not as simple or convenient to use as Debian's BTS. Javascript seems to make Konqueror unhappy.	Jun 29, 2010 6:08 AM
132	The default bug search (not advanced) hides bugs in certain states. E.g. if a bug hits me which has been reported and already is "Won't fix" or "Fix Released" I will not find it unless I use the "Advanced Search" and explicitly enable those states. I think many duplicates are caused by Launchpad newbies not knowing this. IMHO the default search should show bugs of all states.	Jun 29, 2010 12:20 PM
133	Lack of intergration with ubuntu brainstorm. Brainstorm would benefit from being moved to launchpad and being directly intergrated.	Jun 29, 2010 6:53 PM
134	The hard discoverability of some settings as a project maintainer. The navigation, in general, is awkward in some places, i.e. unless you are an experienced user, it is difficult to find some of the pages you need for your work.	Jun 30, 2010 9:27 AM
135	Could be faster and could have more features like but I think that Launchpad will have it in the future.	Jun 30, 2010 11:35 AM
136	It's slow. Also, I often need to hunt around to find what I want, I'd prefer to have some dashboards that gave me a view of what I was doing across projects. Also, more integration/automation between subsystems: I don't want to mark a bug as 'Fix Committed' when I merge a branch, for example.	Jun 30, 2010 11:41 AM
137	Launchpad 3.0's interface was (visually) a HUGE step backwards. It made some good improvements, but the new layout is an overwhelming wall of text. Color coding was reduced, space for text to breathe was reduced, the search field was moved to the very bottom (and some pages are incredibly long). I could go on and on, but suffice to say that it has been unbelievably frustrating to have become attached to Launchpad only to see it lose most of the beautiful visual identity that made me fall in love with it in the first place. I think that Launchpad's web team understands that interface is important as functionality, but I think whatever reasoning that led to the 3.0 visual design blinded the team to more important fundamentals of usability: color, shape (icons), negative space. This has put a serious hamper on my desire to recommend Launchpad to others. Before 3.0 I would have answered the next questions "10", but I can't recommend it nearly as wholeheartedly any more. As great as Launchpad is, interface is important enough that they might as well go with Google Code (lower entry barrier) or something. Oh, and Launchpad really, really, really, REALLY needs a wiki!	Jun 30, 2010 11:58 AM
138	I find it difficult to navigate and find out who needs what help and how	Jun 30, 2010 2:00 PM
139	Bug reporting it's not that advanced for some projects.	Jun 30, 2010 2:19 PM
140	It's a bit complicated for non initiated people.	Jun 30, 2010 5:51 PM
141	Not very user-friendly. Naming conventions are not very obvious as to what they are.	Jun 30, 2010 7:47 PM

Response Text		
142	Only supports bzt (my choice, but work uses svn). Lacks easily-used security/privacy/access control options for local deployments. Apparently what I need to do is *possible*, but requires mucking about with the Zope config directly, which I don't know how to do yet. (I need to be able to have a "group-members-only" project, restricting who can post to and view an Answers section.) If that gets implemented it would be extremely likely that we would deploy it at work.	Jun 30, 2010 10:09 PM
143	The confusing roadmaps system and I really miss a wiki.	Jul 1, 2010 1:38 AM
144	aucun idée	Jul 1, 2010 6:18 AM
145	It's slow.	Jul 1, 2010 8:45 AM
146	no git :-)	Jul 1, 2010 1:35 PM
147	Cannot login with my OpenID account to launchpad. This makes the product, well, fail.	Jul 2, 2010 3:09 AM
148	Often it is not obvious how to do certain (easy) things: - adding your first download file Missing a general activity list for my project, a unified list of activity like the sourceforge one No wiki or site capability Many pages try to have information for all possible user types, and as such fails all users	Jul 2, 2010 4:09 AM
149	It has no support for comments in rosetta (like "talk" pages on wikis), it doesn't have notification system for revisors so that other translators can notify the revisor about their translations or if they need help. Also, it would be nice to have bookmarks, so that any user can bookmark any launchpad page directly in their Launchpad account instead of web browser.	Jul 2, 2010 7:43 AM
150	Slowness of the translations interface. It takes a lot of time to load the next page.	Jul 2, 2010 8:19 AM
151	week long queue when some builders are disabled	Jul 2, 2010 12:12 PM
152	The horrible lag when accessing.	Jul 2, 2010 7:55 PM
153	Lack of simple step by step documentation. An undocumented feature is not a feature.	Jul 3, 2010 6:54 AM
154	sometimes a bit complicated	Jul 3, 2010 10:08 AM
155	Focus on Bazaar	Jul 3, 2010 1:42 PM
156	Projects have unusual repositories and are difficult to integrate with team PPAs.	Jul 4, 2010 2:28 AM
157	It's very slow sometimes, and a wiki-like feature would be nice. Git integration is also something I'd like to see, but I understand that is not so easy to integrate.	Jul 4, 2010 6:54 PM
158	Doesn't offer web hosting. Well, not a major problem. LP ROCKS!	Jul 5, 2010 9:43 AM
159	The current blueprint system, its old, its non-collaborative.	Jul 6, 2010 7:40 AM

161	TOO SLOW!!! I come from China.	Jul 6, 2010 2:10 PM
162	There are no guidelines on how to create nwe packages, what they have to include and how to start developing.	Jul 6, 2010 8:30 PM
163	Not much that I can find right now wrong.	Jul 7, 2010 12:37 AM
164	There isn't enough documentation on how to set up a new project.	Jul 7, 2010 12:53 AM
165	The use of bug report pages for feature requests.	Jul 7, 2010 2:12 AM
166	hard to search for "Projects", "PPAs", "Teams".. it's all combined into one pages long search result	Jul 7, 2010 2:55 AM
167	Can't setup bug-flow for a project (and most simple project do not need a complex bug-flow as present in Ubuntu). No convenient wiki to have docs (blueprints are not the same). No official discussion tool for a project. Overly complicated user interface with unaligned and honestly bad visual design.	Jul 7, 2010 6:05 AM
168	that is not the default repository ahahah, I can't find anything that I don't like tho :D	Jul 7, 2010 6:28 AM

Response Text		
169	I have to go all the way to the bottom of the page to go to the homepage.	Jul 7, 2010 6:32 AM
170	That there are no attachments for questions.	Jul 7, 2010 8:52 AM
171	Translators' local team system. Instead a local team for countries - areas, there should be language teams. Language teams should not listed under countries they mostly spoken.	Jul 7, 2010 10:17 AM
172	I really miss a translations-only search. When I translate something, I don't want to reinvent the wheel and confuse users with different translations for the same word. When the same word is used in English across several programs, it must be the same in other languages, otherwise it causes nothing but mess. Or, if I found a translation error, I'd prefer not look through the whole Launchpad to find where to fix it.	Jul 7, 2010 10:56 AM
173	The documentation of the site isn't great	Jul 7, 2010 11:02 AM
174	The support of only one version control system: Bazaar. Working with branches in Bazaar should be worth me more Karma.	Jul 7, 2010 11:38 AM
175	The inability to create a directory of documentation. Even when documentation is stored inside projects, it is not possible to add a link to it and use it, because it is treated as source code. This means that I still need another server to publish my documentation and blueprints.	Jul 7, 2010 12:12 PM
176	Bugs ;)	Jul 7, 2010 1:12 PM
177	all things	Jul 7, 2010 1:38 PM
178	Nothing so far	Jul 7, 2010 1:48 PM
179	can be too complex at times.	Jul 7, 2010 2:26 PM
180	Nothing -- but am concerned that accessibility remain a priority for the team because the most popular of our code on Launchpad is a game for blind people and we have a number of talented blind developers who really enjoy working on the project. Other sites are not as accessible as Launchpad but I do hope that Launchpad can continue to remain accessible and simple to use.	Jul 7, 2010 4:04 PM
181	Would be great when you add more targets then Ubuntu distributions.	Jul 7, 2010 5:46 PM
182	- Blueprints that are marked as documentation are nearly invisible. - Blueprints are not adequate for longer texts. Launchpad is probably missing an integrated Wiki (like Trac). - Releases can not be connected to code. I think a release should contain a reference to a tag, or to a revision. - It should also be possible to connect Bugs to revisions (links from revision to bug would be nice too). - The integrated browser for Bazaar branches is not good.	Jul 7, 2010 7:24 PM
183	Bad person	Jul 7, 2010 9:21 PM
184	Nothing.	Jul 7, 2010 10:12 PM
185	Don't know :)	Jul 7, 2010 10:25 PM
186	Karma expiration. I would much prefer a metric which reflects "What have you done for Ubuntu" than the current karma expiration system, which seems to rudely ask "What have you done for Ubuntu LATELY???".	Jul 7, 2010 10:32 PM
187	its centralized architecture (I think that this is critical issue)	Jul 7, 2010 11:55 PM
188	It takes a long time to learn how to use it.	Jul 8, 2010 1:05 AM
189	I'd rather like lintian output for my package uploads in the build logs. The build queues can get a bit long, but this isn't a major problem.	Jul 8, 2010 2:34 AM
190	Nothing in particular.	Jul 8, 2010 3:38 AM
191	Website layout is confusing. Being a noob, I have a hard time getting to where I want to go. This is especially so between the login landing page and the project specific pages. Sometimes I get lost going into the help pages and there seems to be no way back from there.	Jul 8, 2010 9:33 AM
192	It should have a project wiki too.	Jul 8, 2010 9:38 AM
193	Not sure...	Jul 8, 2010 9:59 AM
194	same as above	Jul 8, 2010 5:27 PM
195	Can't think of anything....	Jul 8, 2010 8:45 PM

Response Text		
196	I'd prefer support for other dpkg-based Linux distributions in the PPAs, and perhaps a more application-accessible method of file storage (such as WebDAV or FTP).	Jul 8, 2010 10:22 PM

220	it's a pig to navigate	Jul 11, 2010 2:27 PM
221	Very slow feature implementation	Jul 11, 2010 4:10 PM
222	didn't get answer about wireless printing	Jul 11, 2010 6:19 PM
223	<p>Paradoxally, it isn't translateable! I LOVE TRANSLATED PROGRAMS!</p> <p>Proposing translations should be improved: Some translations are not perfect because some new people translate without knowing our translation rules. It should be improved IMHO by adding translation groups: for example, newbie can't add automatically translations but they can only propose (I've been translating since too much time so I don't know if it is so or not). New translations should be highlighted so that checkers, who are "old" users, can control if the translation is correct. if so, translation is not highlighted anymore. Trusted translators can automatically by-pass this check, automatically translating and deleting uncorrect proposes, in order not to be visualized. Last but not least, sometimes proposes translations are not all the proposes translations of that key.</p> <p>Sorry for my english. I hate it.</p>	Jul 11, 2010 7:45 PM
224	<ul style="list-style-type: none"> - No wiki - Better integration for merging (link to proposal after the merge) - User interface: it's better now but sometime it's long to go where you want to go. - It's often slow. A more responsive interface could be really better! 	Jul 11, 2010 11:50 PM
225	The computer software name mentioned on the bottom of the website.	Jul 12, 2010 5:20 AM
226	sometimes when attempting to post bugs, the server will not accept	Jul 12, 2010 7:10 AM
227	<p>Too many bugs reported : it's sometimes hard to find something. For now — as I know —, there are only division between packages. Maybe there could be bug division inside package.</p> <p>For instance : Typo ; crashes while launching ; crashes during execution ; display bugs ; misbehavior ; ...</p> <p>I think it would be easier to find one's way.</p>	Jul 12, 2010 10:35 AM
228	<ul style="list-style-type: none"> - "+junk" as the name of non-project branches. It denigrates personal branches and usually I can't send a link with +junk to other people because of that. :-P - lack of other (potentially inter-operable) launchpad instances. As far as I know, the code is free but no one uses it. :P 	Jul 12, 2010 11:42 AM
229	navigation is not always clear.	Jul 12, 2010 12:46 PM
230	I don't know how to use it	Jul 12, 2010 2:15 PM
231	poor usability for new comers	Jul 12, 2010 2:35 PM
232	It is'nt in variety of languages.	Jul 12, 2010 2:49 PM
233	<p>the inability to edit an "Answers" based post the Answer Section of inkscape, once it is submitted it is locked and no editing can be performed.</p> <p>Lack of templates for assistance based forums. example: Most sites like this have a key component of a forum for assistance with a program. Open Source projects are very mismanged when it comes to offer assistance. Yet commercial programs are very structured when it comes to assitance.. Launchpad should have templates a given user should have to fill in prior to submitting request for Help (inkscape's Answers section). If the fields are NOT filled in the user is not allowed to submit a request for assistance..</p>	Jul 12, 2010 2:51 PM

Response Text		
240	Everything is pretty much perfect	Jul 13, 2010 4:26 PM
241	Seeming disregard for new users, answers are often given which will puzzle new user, especially if terminal is used. I am not new to terminal, but after i copy an endlessly long script and try to run it, a very sobering note comes up "no such file or directory". This is puzzling, seems like there are different directory structures within a same distro. It seems the help team is overworked and stressed. Often problems are brushed off. A quick example: there was a bug up until 9.10 (i think) -- if 'Save' or 'Save as' was clicked, the window would pop up but it was wider than screen area (what's the big deal you ask?) the big deal is that the radio buttons are not accessible, hiding behind the edge of screen. Some other user posted this, but she was brushed off by something like "so adjust it" that's not the solution, this is one the most frequently used functions, so having to adjust it or drag the window over is pretty annoying. And it's a simple bug, there is a typo somewhere where the window size is defined.	Jul 13, 2010 4:49 PM
242	most everyone will speak as though you are completely aware of a more than likely, completely foreign situation. whereas, some people are bound to know none of the commands for terminal use, let alone ordering them, when to use them, etc. most of ubuntu's interface i have encountered operated like a windows one, in pull down menus. but setting up what isnt updated or downloaded through ubuntu for you (downloads off of sites), is something that you are bound to need the terminal for. for those that are used to executables, without having a lot of knowledge before this point, that all can become more than daunting. sadly, answers, even after achieving a vague understanding, still were apparently nothing that could be solved by a copy paste of the explained actions. no matter how zero'ed in either of us thought we were on the issue. but when i open a folder on top of that, and see nothing i recognize as a install, it just makes it worth even less. when i struggle over one issue, to find i know nothing about how to do the next part either. i may not use the keyboard as much as a linux user, but as far as a learning curve. i imagine that linux would be picked up a lot slower than a windows environment. forgive me for my (especially at this moment) not so unbiased opinion.	Jul 13, 2010 5:37 PM
243	far away from upstream	Jul 13, 2010 11:14 PM
244	It's hard to learn about it. For instance, I'm googling my ass of to learn what a blueprint on Launchpad is right now!	Jul 14, 2010 1:16 AM
245	Bugs about Launchpad itself often meets delay (with me).	Jul 14, 2010 1:48 AM
246	web UI is very poor, also login account creation / adjustment is unnecessarily complicated and ugly	Jul 14, 2010 2:17 AM

268	bzr	Jul 14, 2010 10:11 PM
269	No wiki, I need to go to Google Code for that. The overview project page might still be a little complex to use as a frontend for the app towards real broad average users. For instance the green download buttons are a bit weird (and short). Sometimes a bit slow. No place to store screenshots or other miscellaneous files that aren't downloads. Sometimes myself I get a bit lost, or it is hard to estimate in advance the effect of clicking a button. I guess for such a powerful website usability is certainly not bad. Little support for Android apps, despite of the bugs filed (#275290).	Jul 14, 2010 10:15 PM

298	Confusing bug summaries.	Jul 16, 2010 8:02 PM
299	there isn't any statistics about project's development	Jul 16, 2010 9:11 PM
300	n/a	Jul 17, 2010 5:17 AM
301	<p>So, so much.</p> <ol style="list-style-type: none"> 1. When I update information it isn't always immediately reflected across the site. For example, I just set a bug to "Fix released", went to the bugs page and it still says "Fix committed". I know it's changed, and in a few minutes something will update something else and then the page will be correct, but in that time it looks like it didn't work and feels inconsistent. 2. Layout. I like that it's minimalistic. I don't like that things just hover in the middle of nowhere. Things should be grouped a bit more clearly. 3. Default bugs view shows hot list, default blueprints shows all of them 4. Bugs list misses important information, such as milestone 5. I could go on... 	Jul 17, 2010 12:22 PM
302	viewing and browsing code on launchpad is VERY awkward, github is far better for this.	Jul 17, 2010 1:31 PM
303	UI of web sit is bad. Font on my screen (tried two browsers) is like 1 pixel wide --> doesn't show up well. Too many links that seem irrelevant. Confusing to new users (like me)	Jul 17, 2010 3:48 PM
304	Interface.	Jul 17, 2010 4:41 PM
305	The user interface could go for a little refresh... lol	Jul 17, 2010 5:26 PM
306	It takes time to understand at beginning. It's easy but not obvious.	Jul 17, 2010 9:05 PM
307	Nothing	Jul 18, 2010 1:47 AM
308	<ol style="list-style-type: none"> 1. That it is run by one company (or at least it has the public perception as such. I don't know if that is really the case.). I always an a little bit wary of investing time and data in an online service--what happens if the company running it closes? I would better prefer that a council/community organization ran it. That way, if companies go out of business or someone can't do it any more, it would continue on. This would also make launchpad seem less like Ubuntu/Canonical's bug tracker, and more the Libre software communities'. This might help convince more projects (like, say Fedora) to use it. Would you invest all your bug data in a "competitors" bug tracker? 2. Seemingly always having to file bugs upstream. 3. Not being able to edit bug comments (maybe there should be an open time of at least a few minutes or until the next comment is posted). 	Jul 18, 2010 4:29 AM
309	the fact that bazaar didn't catch the world by storm, and I still have to use it while my other projects are now on git	Jul 18, 2010 12:24 PM
310	Nothing	Jul 18, 2010 2:10 PM
311	Not enough answers	Jul 18, 2010 2:58 PM
312	<p>Lack of flexibility in the issue tracker (which is understandable, given its featureset).</p> <p>Blueprints/documentation have to be hosted externally. (Can we get a project wiki or something?)</p>	Jul 18, 2010 3:39 PM
313	nothing	Jul 18, 2010 3:46 PM
314	UI doesn't seem to work well. Pages not structured so the eye doesn't know where to settle. This puts me off publishing projects on launchpad, which is a shame.	Jul 18, 2010 6:14 PM
315	Not as many features as sourceforge	Jul 18, 2010 6:54 PM
316	It can be hard to understand the whole process of versions/releases in a project, or managing translations. At least, that's my opinion.	Jul 19, 2010 12:41 AM
317	It's English-only interface. Please address "[Bug 3896] Launchpad itself is not translatable in Launchpad"	Jul 19, 2010 1:08 PM
318	Inability to make private repositories.	Jul 19, 2010 3:37 PM
319	Any idiot with no command of a language can "translate" and there is no way to report the user.	Jul 19, 2010 6:59 PM

338	Sometimes the build queue for new packages is huge,thus it sometimes takes 3-4 days for my package to be ready,it would be awesome if more hardware could be added to meet the growing need.I understand that this will take time,but i would like to see this happen in the near future	Jul 22, 2010 12:29 PM
339	So far nothing!	Jul 22, 2010 6:30 PM
340	Nothing important, I just would like to see the number of downloads for the ppa	Jul 23, 2010 9:42 AM
341	Bugs do not seem to be addresses much or are re-classified as non-bugs despite being bugs.	Jul 23, 2010 11:42 AM

Response Text		
342	<p>openid login makes it so a user has to login twice</p> <p>ex: I login from edge.bug. I goto lp and login using open id it goes through two windows confirming my login and sends me back to the page ex: edge.bug. ... on that page I am not logged in and have to login yet again this time it works</p> <p>this is normal and it happens everytime I login when I click to log out I also have to go to launchpad.net and log out there</p> <p>so double login and logout</p>	Jul 23, 2010 1:15 PM
343	none	Jul 23, 2010 1:33 PM
344	should be more accommodated to the profile of people who are starting ... and would be great launchpad for the translation of other continents.	Jul 23, 2010 4:40 PM
345	The lack of been able to add a project to my profile as a favourite or to a watchlist. Also the ability to find projects easily either by taxonomy/tagging or in categories.	Jul 24, 2010 12:18 AM
346	non-systematic methods used sometimes.	Jul 24, 2010 1:53 AM
347	Sometimes it is a little slow in China.	Jul 24, 2010 3:18 AM
348	I must say that logging in to Launchpad is too slow, if luckily I may log into within 3 minutes, or just can't log in. I'm in China, though, I can visit other sites with no problem, but the launchpad.net is just too slow.	Jul 24, 2010 4:13 AM
349	Very hard to navigate. I tried to find some links on launchpad for an appropriate channel to find the author of a project but the navigation just puts me off. I think the navigation in launchpad attempts to look simple and nice but in fact it's all over the place. Not idiot proof. Please take a look into re-designing launchpad look and feel factors. I would not try to go to launchpad unless necessary because of this. Make me like launchpad.... don't make me visit launchpad only when necessary.	Jul 24, 2010 4:22 AM
350	I cannot find out how to tell that I would be willing to translate something, - or if this is possible from launchpad. Also other more advanced things like how to get to be the person that packages some programs or similar seem to be hidden somewhere.	Jul 24, 2010 7:09 AM
351	nothing	Jul 24, 2010 7:27 AM
352	Launchpad is only in English	Jul 24, 2010 2:08 PM
353	It's hard to click-through between source, built packages and bugs. Bugs cannot be assigned to a specific package version.	Jul 24, 2010 4:52 PM
354	doesn't list main project in some places	Jul 24, 2010 5:40 PM
355	Interface, not much user friendly.	Jul 24, 2010 6:34 PM
356	It's faster than SourceForge, but still could be a lot faster.	Jul 24, 2010 7:16 PM
357	It's slow as hell. Some translation policies and teams are fragmented (like the Danish), although that's probably not Launchpad's fault.	Jul 24, 2010 8:12 PM
358	1 - very poor design 2 - the homepage doesn't bring much more informations about the projets	Jul 24, 2010 9:03 PM
359	very difficult to navigate the "how" of submitting patches to projects. The structure is there, but distributed and confusing. I would wish for a more uniform and consistent interface between the functions instead of whole separate feeling sites.	Jul 25, 2010 1:08 AM
360	<p>You used the HTTP status code 200 OK when you encountered an internal error! That should have been a 500 Internal Server Error or something.</p> <p>Feels very tied to Ubuntu, which is probably good if you develop for Ubuntu, but I do not.</p>	Jul 25, 2010 1:51 AM

Response Text		
361	You cannot edit your own given answers..	Jul 25, 2010 1:09 PM
362	The password requirement (in particular requiring at least one uppercase character) is plain fucking stupid. The vast majority of my other passwords require things like 1 non-alphanumeric or just 1 numeric, but rarely do they require an uppercase character. Thank you for having me memorize YET ANOTHER permutation of a fucking password.	Jul 25, 2010 6:31 PM
363	* Translate do not save the last page you were translating, and you have to navigate page by page looking for your last translation. * It lacks information about how to use launchpad+bazaar for development (incomplete) theres a good document on http://www.joinfu.com/2008/08/a-contributors-guide-to-launchpadnet-part-2-code-management/ maybe it just needs some examples. * It lacks favorite links on your use home page; you have to search each project you follow. * It lacks a wiki, it really needs one for blueprints. * Theres no link back to launchpad from help.launchpad.	Jul 25, 2010 7:50 PM
364	not so clear to me the how do	Jul 26, 2010 11:28 AM
365	not everything is connected to it	Jul 26, 2010 3:29 PM
366	A number of thoughts here: - Little facility / function exists for assessing impacts from an end-to-end perspective, particularly with *fixes*, but also apparent with cases. The quality is not uniform. All cases should be the same. Priority means cases are addressed in a different order, not binned outright if the case is outside of the critical banner. - Dissemination and cross-pollination of new features/developments do not appear to be (or are inadequately) reviewed against cases. This in turn leads to an overhead of cases which float around the system and do little in the mean time. Communication and review required! - Launchpad is cumbersome and confusing - too much detail for non-linux-speaking people - the process needs to be simple for raising and viewing a case, and when that case will be fixed. - Idea/suggestion to run a two tier system? First tier is a front-end with simple case description / impact / fixes / scheduled date for fix, and detailed back end for those wishing to add ideas and detailed contributions to cases - bit like a basic project management plan	Jul 26, 2010 6:45 PM
367	Nothng :)	Jul 27, 2010 3:06 AM
368	I mostly report bugs. Need to take time and explore more to form an accurate opinion	Jul 27, 2010 6:45 AM
369	* Renaming and re-associating of projects is complicated * Code branching from behind a proxy does not work * Code import is difficult	Jul 27, 2010 8:10 AM
370	No Dislikes at this time. :-)	Jul 27, 2010 8:46 AM
371	Only has bazaar source hosting on site	Jul 27, 2010 11:03 AM
372	Not having support for i18n, specially in Answers,	Jul 27, 2010 11:45 AM
373	Kinda hard to get a PPA working XD	Jul 27, 2010 12:37 PM
374	Git not being a first-class citizen VCS. Impossibility to mark a bug no longer affecting a project.	Jul 27, 2010 1:16 PM
375	The structure of the teams. It is very difficult to tell what is going on when some one belongs to a team but is not on the committer list. I prefer things like the followers and editors as done at github/bitbucket. Also bazaar. It would be much better if it also supported other DSCM systems.	Jul 27, 2010 4:23 PM
376	nothing	Jul 27, 2010 6:28 PM

Response Text		
377	the way of uploading my project and it's code could use a bit more work (like SFTP uploading, that was a plus). Another thing could be to allow more space in the ppa's (however that's a hardware limitation) and anyways the bandwidth (despite the limit of storage) is much better than sourceforge. The fastest speed I've downloaded a list of the packages in my project was at 255 kbps to where as with launchpad I can download the list of all the packages in my project within seconds.	Jul 28, 2010 4:49 AM
378	All interfaces are in English... know English, but prefer my base language (Spanish).	Jul 28, 2010 4:57 AM
379	se the answer over i dont have friends that use linux	Jul 28, 2010 7:33 AM
380	No beefs	Jul 28, 2010 10:11 AM
381	nothing so far.	Jul 28, 2010 10:48 AM
382	Pages often load slow due to SSL. No wiki or ability to host static files (i.e. for storing docs)	Jul 28, 2010 3:55 PM
383	Not being able to navigate the user interface as yet and, The ability with the remote connectivity to explore other users systems remotely.(big Brother Style as i do get carried away sometimes(What works And what does not) ;-) But with nowt to hide except stupidity Your all most welcome to explore My domain.	Jul 28, 2010 6:33 PM
384	lack of interface. all the possible actions aren't intuitively available. I'm trying to file a bug but where is that on the home page? no where	Jul 28, 2010 8:38 PM
385	nothing really, I dislike myself who do not care in off to keep up to date with all the information from Launchpad.	Jul 28, 2010 9:23 PM
386	no wiki	Jul 29, 2010 9:34 AM
387	Some things, such as package search, have become a LOT more messy and hard to navigate. The package search should behave more like packages.ubuntu.com.	Jul 29, 2010 9:48 AM
388	The speed and timeouts.	Jul 29, 2010 10:18 AM
389	Some of the workflows are complicated. I, as an experienced software developer, has to read several howtos to do simple tasks even the second or tenth time	Jul 29, 2010 10:51 AM
390	The lack of some social things like connection between users (with a stream of activities of friends), statistics of code, a simple system for star the favourite projects (like the star in Google Code). The lack of basic formatting of project details, release notes, blueprint ecc. Especially on blueprints a wiki-style editing would be appreciated.	Jul 29, 2010 11:03 AM
391	the design its too confusing, you never know where youre, for example if you clicked on a version or milestone, the you seem to be in overview, because of the top menu, but in real youre in some sub category.	Jul 29, 2010 12:16 PM
392	n/a	Jul 29, 2010 5:17 PM
393	I don't "dislike" anything. But it would be really cool if I could tell it what releases of Ubuntu I was interested in (ie, I have installed on my systems) and it would then lead me to bugs, blueprints, answers etc for related packages!	Jul 29, 2010 7:40 PM
394	not much	Jul 29, 2010 8:55 PM
395	The UI can be very intimidating to new or inexperienced users. Some easy to access documentation would be helpful.	Jul 29, 2010 10:10 PM

Response Text		
396	<p>The UI is awful. It seems to have been designed by the developers (as a developer, I think I can call that! :) All that white space and hundreds of links on every page without any clear visual hierarchy. Contrast that with GitHub or Google Code.</p> <p>I got really confused by the concept of creating branches under a team, rather than a project.</p> <p>The really needs to be the ability to checkout code with git, hg and svn. Bzr may be great, but it hasn't gained the traction that the other DVCS's have.</p> <p>There's an interesting discussion going on about this with people in the Plone community. See:</p> <p>http://www.martinaspeli.net/articles/developer-centric-version-control-considered-harmful http://www.garbas.si/blog/2010/i-disagree-developer-centric-version-control-considered-harmful</p> <p>and the comments on the second one.</p>	Jul 29, 2010 11:45 PM
397	nothing yet	Jul 30, 2010 4:03 AM
398	?	Jul 30, 2010 4:03 AM
399	Many bugs on the edge servers	Jul 30, 2010 6:44 AM
400	it's not possible to edit my own post (i.e. on answers.launchpad.net) so I can't correct my typing :)	Jul 30, 2010 2:31 PM
401	<ul style="list-style-type: none"> - bazaar, it makes the whole difference, but negatively - blueprint - usability (too many click to get through some config for translation or setting up a new team/project/branch, ...) - interface needs some polish: translation forms are not straightforward for non technical people/translator - did I mention bazaar ? bazaar is the ironic part of launchpad 	Jul 30, 2010 3:58 PM
402	Hard to configure (especially for people who are not tech savvy). Possibly ability to run reports (management tools)	Jul 30, 2010 6:23 PM
403	The search function not respecting the translating settings (mainly filtering (un)translated strings). No option to leave some comments along the translation	Jul 30, 2010 6:43 PM
404	New focus on ignoring bugs as effectively as possible.	Jul 31, 2010 2:18 AM
405	Nothing	Jul 31, 2010 4:02 AM
406	N/A	Jul 31, 2010 4:18 AM
407	this yellow backdrop is hideous	Jul 31, 2010 9:26 AM
408	The fact that all the content is copyrighted to Canonical. I think that the content should be creative commons	Jul 31, 2010 12:44 PM
409	The bug list, I often try to be in the 5-a-day project and I tend to get mess on the bug list to triage, I how that get improve soon.	Jul 31, 2010 3:33 PM
410	It's a little confusing at times, but that is just cause I am fairly new yet with it.	Jul 31, 2010 4:00 PM
411	<p>The interface is sometimes too crowded. If you compare with Google Code it is much easier to find what you want in Google Code.</p> <p>Also I would like to disable the menu items I do not use in Launchpad like Bugs, Blueprints, Answers (I use Launchpad only for translations and the project itself is hosted on Google Code)</p> <p>What also would be very nice if you could import translations directly from foreign-hosted CVS without having a mirror on Launchpad.</p>	Aug 1, 2010 8:47 AM

Response Text		
412	<p>The interface is at times very confusing. It's a lot more complicated to use than would be expected. As an example, when I go to launchpad.net, I have to click several links to get to my main translation project, which is Ubuntu translated into my local language. There should be a personalised front page, making my life easier :D</p> <p>I am fairly new to my role as administrator, but as far as I have experienced it is also very complicated to review other peoples translation efforts as a whole. I would like to be able to do this, so that I could engage in conversation with people regarding their usage of different grammatical forms and such, rather than just correcting their language to a form they might not even know that the group has agreed upon - without recognising a pattern connected to one singular user. Being able to do this would make it easier to keep the effort up and not unintentionally demotivate people.</p>	Aug 1, 2010 11:07 AM
413	Terrible usability, problematic navigation, poor linking between pages related to a software in different contexts, http 500, sticking to a single vcs, hardly working background processes of rosetta.	Aug 1, 2010 11:48 AM
414	None	Aug 1, 2010 2:40 PM
415	i would like browser project for category (office, multimedia, ERP etc...)	Aug 1, 2010 7:58 PM
416	not enough AJAX controls in use	Aug 1, 2010 8:15 PM
417	<p>Hard to navigate.</p> <p>(For question 5, I'm having hard enough time getting people to understand what Linux is. They seriously think you can have Microsoft or Apple.</p>	Aug 1, 2010 11:01 PM
418	So far so good.	Aug 2, 2010 1:42 AM
419	Inability to host it on my own server - it's likely to make us switch to another project at some point.	Aug 2, 2010 9:20 AM
420	The fact that it is sometimes confusing and discouraging for the last comers; considering its complexity I don't know if this is an unavoidable side effect, though. Maybe some more documentation work (and integration with ubuntu Wikis) could make things better.	Aug 2, 2010 3:02 PM
421	Nothing in particular.	Aug 2, 2010 3:18 PM
422	No wiki-like code formatting in comments, blueprints, answers, ... Not possible to write an entire specification/documentation. Instead you have to write it in an external tool and link it.	Aug 3, 2010 11:24 AM
423	Structure is very confusing for new users.	Aug 3, 2010 3:56 PM
424	Sometimes clunky-- e.g., not able to automagically crop/resize images for avaar. (not that hard, relaly)	Aug 3, 2010 7:21 PM
425	like i said i'm new comer	Aug 3, 2010 8:17 PM
426	nothing	Aug 3, 2010 10:26 PM
427	the oops warning	Aug 3, 2010 10:52 PM
428	None	Aug 3, 2010 11:07 PM
429	That some of the projects you can work on there are based somewhere else, upstream downstream all that.	Aug 4, 2010 12:19 AM
430	I do not know it properly	Aug 4, 2010 3:49 AM
431	The UI is somewhat opaque	Aug 4, 2010 9:02 AM
432	Git integration not supported HTML markup is slow in Firefox	Aug 4, 2010 10:40 AM
433	The impossibility to do stuff yourself, e.g. removing your project. Also, outdated braches that are owned by someone who isn't active anymore, can only be removed by that person. They stay in the branches list, and cannot be removed without staffs help.	Aug 4, 2010 11:52 AM
434	<p>Only a few minor annoyances:</p> <ul style="list-style-type: none"> - No links from bug reports to bug fixes (though there are links from bug fixes to bug reports). - Automatic deletion of merged branches. 	Aug 4, 2010 2:09 PM

451	Bazaar	Aug 6, 2010 3:43 PM
452	Nothink, but it is difficult to upload packages to a personal ppa	Aug 6, 2010 5:54 PM
453	It has absolutely no support for other languages. It useless for someone who doesn't understand English.	Aug 6, 2010 6:46 PM
454	the bug system... it,,s bloated	Aug 6, 2010 8:33 PM
455	<p>Just about everything. Honestly that is my impression now. It's hard to figure out whether I'm on the right page to get the right repos for my platform. Compound this with a project like bazaar with relations to lots of coordinated (for better or worse) projects and you have a real mess unless the project owner enforces some discipline. I've found that the safest way to get the right packages is to click on the branch timeline. This is far from obvious.</p> <p>I'm sorry for not being more specific in my critique. I really *want* to like LP. But more and more I just wish it worked like github. They really seem to have put the user first.</p> <p>I still think LP is better than SourceForge but I would not mind if the front-end changed completely. Go ahead and experiment!</p>	Aug 6, 2010 10:21 PM
456	nada de momento	Aug 7, 2010 12:35 AM
457	You are all a bunch of nerds! Your product, especially help with Ubuntu 10.04 LTS has been horrrific!	Aug 7, 2010 6:58 AM
458	A little hard to find things at times. like file a new bug without apport route	Aug 7, 2010 10:35 AM
459	Requirement of Bazaar to download branches. Quite inconvenient non-bazaar users. And web-interface is rather poor substitute.	Aug 7, 2010 12:43 PM
460	The code management. I like bazaar a lot but code hosting on github or bitbucket is much more mature and feature rich. Please make viewing code, commenting on code, comparing code etc more easy, more eye-pleasing and fun to use.	Aug 7, 2010 1:43 PM
461	visual organization	Aug 7, 2010 1:46 PM

469	Speed	Aug 9, 2010 3:49 AM
470	<ul style="list-style-type: none"> - Lack of analytics. - Inability to associate external code with the project. - I would like to see some sort of integration with build.opensuse.org which allows creation of debs/rpms etc for most systems/arch. 	Aug 9, 2010 4:39 AM
471	Everything including lack of professionalism	Aug 9, 2010 10:00 AM
472	I'd like a dark theme instead of css hacking.	Aug 9, 2010 10:54 AM
473	see above	Aug 9, 2010 1:57 PM
474	Step-by-step instructions on how to upload release tarballs to Launchpad are missing; bugs are not marked as "Fix committed" when an appropriate --fixes Bazaar commit is merged or committed into trunk; it should be possible to set up automatic copying of binary packages to earlier releases in PPAs (useful for data-only packages such as icon themes)	Aug 9, 2010 2:30 PM
475	Login not automatic.	Aug 9, 2010 6:11 PM
476	The white background gets a little bright, especially when you've been up for too many hours working on bugs... perhaps have an option to turn it black/dark?	Aug 10, 2010 7:48 AM
477	Duplicate bug reports, maybe.	Aug 10, 2010 1:10 PM

Response Text		
478	when reporting a bug it can happen automaticaly that is easy, but some bugs cant be reported that way and then it is a pain in the ass to figure out wich pakages you should report the bug against and so on	Aug 10, 2010 1:12 PM
479	The separate editing pages for different fields of the same source. The lack of a proper (hierarchical) menu system.	Aug 10, 2010 1:41 PM
480	Ubuntu tells us to package our tools for Debian first and we don't have any PPAs to use for stable, unstable and testing distros. Another thing. Whent triagging a bug, we get lots of emails. Some times a lot. A bit too much talkative...	Aug 10, 2010 2:07 PM
481	VCS like Git and Hg aren't supported (except for code imports). I'd really like to be able to use at least Git with the fantastic code reviews.	Aug 10, 2010 2:18 PM
482	it's slow	Aug 10, 2010 3:02 PM
483	The user interface: I can't find functions and have to search for them (e.g. how to add a milestone). The UI is confused from by following the object model.	Aug 10, 2010 3:08 PM
484	Missing project owner permissions (for example, deleting/deactivating projects)	Aug 10, 2010 8:03 PM
485	low speed	Aug 10, 2010 9:12 PM
486	I was forced to use it.	Aug 11, 2010 2:02 AM
487	It's far too slow. Pages sometimes take many seconds to load. The user interface is far too busy. Lacks the easy ability to produce forks ala github.	Aug 11, 2010 8:14 AM
488	It is not possible to add customized fields in bug reports (or anywhere else, I think). More in general, bzd looks "friendly" to beginners but it's not very customizable. It is not possible to import settings from one project to another (this is well done in Savane). Personally I like bzd, but it would be easy to also support other VCS. Mailing lists are absolutely unusable; in order to make mailman look simpler to use you completely destroyed its power and flexibility; in particular the requirement that mailing lists are bound to groups and not to projects, and that posting is only possible for people belonging to the group, is just ridiculous. If anybody not in the group writes to the list, the message is arbitrarily considered "spam", and silently (!) ignored. Your idea seems to be that collaboration has to happen on the web, and everything else is secondary. I very strongly disagree. Pretty please with sugar on top, let us use mailman with its own web interface, as it was intended to be used. It's trivial for you. We're using launchpad just because the final call was not mine: its terrible lack of power in mailing list management would have made me reject launchpad altogether if I had the power to choose. I won't use launchpad for any personal project.	Aug 11, 2010 4:04 PM
489	see #3 above	Aug 11, 2010 5:04 PM
490	I can't recall of something right now	Aug 11, 2010 5:44 PM
491	UI	Aug 11, 2010 7:46 PM
492	It's not the most user friendly project management software available.	Aug 11, 2010 8:18 PM
493	Lack of customisation. It is pretty much this way or no way. Which doesnt mean it is necessarily bad thing bude it can be sometimes restrictive. I would like to see ability to filter translations based on various criteria - e.g. by project (ubuntu, gnome etc) or by ubuntu edition. Also quality of translations would be better if finished translations would be sent for review and only what would be reviewed would be used.	Aug 11, 2010 10:54 PM
494	It is hosted on underpowered servers that cannot keep up with demands for it. Search queries abort with timeouts, etc.	Aug 11, 2010 11:47 PM
